

Mid early

Table potato Fresh

Galina is a mid early variety, producing many regular oblong tubers with yellow skin and yellow flesh.

Very productive with a nice skin finish, it is suitable for the fresh market. It is quite tolerant of leaf blight and common scab.

## Why GALINA ?

Nice skin finish with yellow skin and yellow flesh

High yield and tuberization

Tolerance to leaf blight and common scab

Good for long fridge storage

## DESCRIPTIVES CHARACTERS

### Tuber

Shape	Oblong
Regularity	Regular
Eye depth	Shallow
Skin	Yellow
Flesh	Yellow

### Lightsprout

Purple red light coloured

### Flower

White

### Flowering

Fairly abundant

## GROWING AND USE-RELATED

### Yield

Very Good - 140% Spunta

### Caliber

Hight proportion of large tubers  
Tubers numbers / plant : 14-16

### Quality

Taste quality	Good
Cooking resistance	Good
Blackening after cooking	None
Culinary group	AB
Dry matter content	18%

### Physiological characters

Rust spots	Low susceptibility (8/9)
Hollow heart	Low susceptibility (8/9)
Cracks	Low susceptibility (8/9)

### Susceptibility to diseases

Leaf blight	Slightly susceptible (6/9)
Tuber blight	Slightly susceptible (6/9)
Virus Y	Low susceptible (7/9)
Virus X	Low susceptible (7/9)
Virus PLRV	Low susceptible (7/9)
Common scab	Slightly susceptible (6/9)
Nématode RO1-4	Susceptible (3/9)

### Susceptibility to bruising

Fairly susceptible (4/9)

### Susceptibility to desprouting

Low susceptible (7/9)

### Storage ability

Good (7/9)
