

Mid early

Table potato

Mid-early to medium variety, producing large, regular tubers with pale yellow skin and white flesh. Vigorous and suitable for Mediterranean country areas for season and winter crop. Rustic and of good conservation, it has low susceptibility to mechanical damage

## Why NAJAH ?

- ✔  
 Very large, regular tubers, with nice bright skin finish
- ✔  
 Good for winter replanting
- ✔  
 Very good storage ability
- ✔  
 High resistance to heat and water stress

## DESCRIPTIVES CHARACTERS

### Tuber

<b>Shape</b>	Oblong
<b>Regularity</b>	Very regular
<b>Eye depth</b>	Very shallow
<b>Skin</b>	Light yellow
<b>Flesh</b>	White

### Lightsprout

Light purplish red

### Flower

Violet

### Flowering

Fairly abundant

## GROWING AND USE-RELATED

### Yield

120% of Spunta

### Caliber

Hight proportion of large tubers  
Number tubers / plant : 10-12

### Quality

<b>Taste quality</b>	Good
<b>Cooking resistance</b>	Good
<b>Blackening after cooking</b>	None
<b>Culinary group</b>	AB
<b>Storage ability</b>	Very good (9/9)
<b>Dry matter content</b>	19%

### Physiological characters

<b>Rust spots</b>	Very low susceptible (9/9)
<b>Hollow heart</b>	Very low susceptible (9/9)
<b>Cracks</b>	Low susceptible (7/9)

### Susceptibility to diseases

<b>Leaf blight</b>	Susceptible (3/9)
<b>Tuber blight</b>	Low susceptible (7/9)
<b>Virus Y</b>	Susceptible (3/9)
<b>Virus A</b>	
<b>Virus X</b>	
<b>Virus PLRV</b>	Low susceptible (7/9)
<b>Common scab</b>	Slightly susceptible (6/9)
<b>Warty scab</b>	
<b>Nématode RO1-4</b>	Susceptible (3/9)

### Susceptibility to bruising

Slightly susceptible (6/9)

### Susceptibility to desprouting

Low susceptible (7/9)

### Storage ability

Very good (9/9)
